

Is it too soon
for OT?

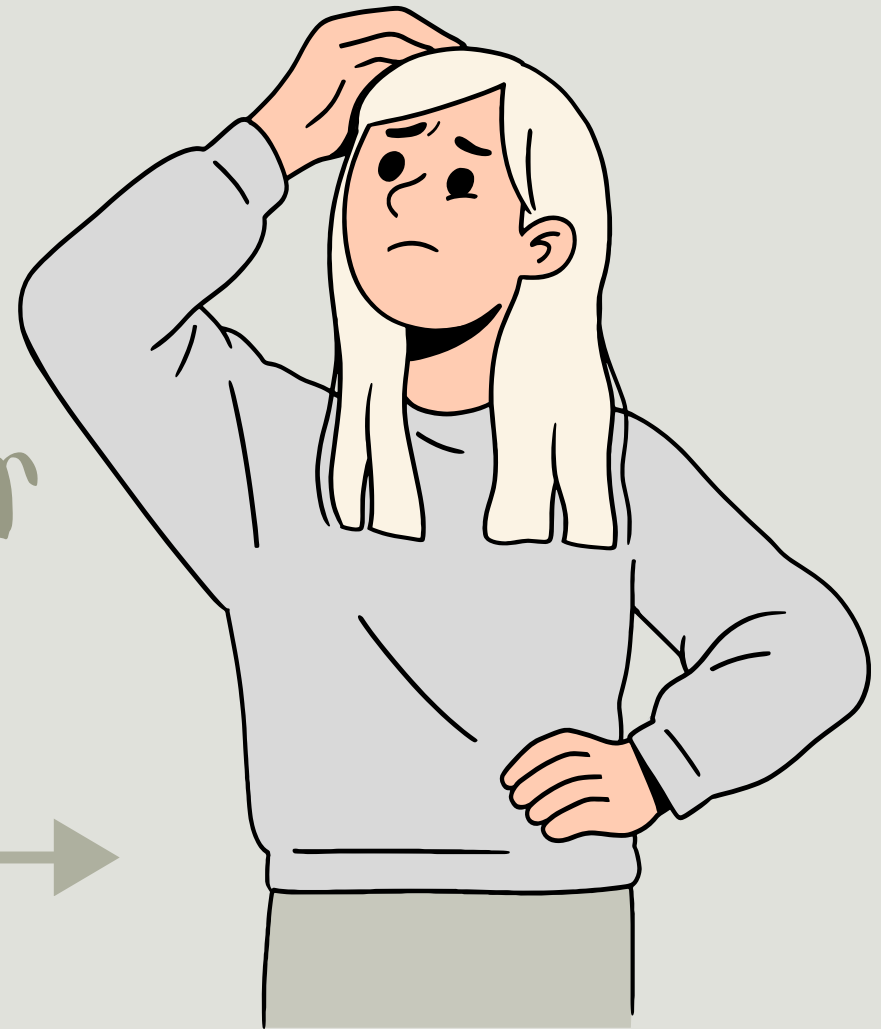

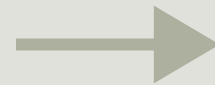

@MeghanButlerOT

OT is still very daunting territory for a lot of parents...

"is it too early for things like this?"

asks Concerned parent

With this short reading piece, I will take the liberty of elaborating on a few reasons why any OT will advocate for early intervention

Here are a few of the reasons why we advocate for early intervention:

- The brain is most plastic in the early years, meaning that it is more adaptable and able to change. This makes early intervention a critical time for intervention, as it can help to shape the development of the brain and nervous system.
- Early intervention can help to prevent or reduce the severity of developmental delays. By providing children with the support they need early on, OT can help them to catch up to their peers and avoid more serious problems later in life.
- Early intervention can help to improve the quality of life for children and families. When children receive the support they need, they are more likely to be happy, healthy, and successful. This can also help to reduce stress and anxiety for families.
- Early intervention is cost-effective. Studies have shown that early intervention can save money in the long run by preventing more serious problems and helping children to reach their full potential.

If you are concerned about your little one's development, don't wait!

Go fill your information box and read up on OT!

Earlier is better!

@MeghanButlerOT

So... to conclude

Any OT firmly believes in early intervention,
meaning...

"The younger, the better"
